HOW TO READ THIS PAGE

Each row is one metric. The hollow dot is where he started, the solid dot is where he is now, and the shaded bands are how our whole database is spread out on that metric.

A change is only called Improved or Declined when it beats both his own trial-to-trial spread and the smallest change that matters across the population — whichever of those two is stricter. Everything else reads as Held.

Percentiles are against every athlete in our database who has performed that movement, matched on gender.
